LICENSE TO PUBLISH AGREEMENT FOR CONFERENCE PROCEEDINGS

This License to Publish must be signed and returned to the Proceedings Editor before the manuscript can be published. If you have questions about how to submit the form, please contact the AIP Publishing Conference Proceedings office (confproc@aip.org). For questions regarding the copyright terms and conditions of this License, please contact AIP Publishing's Office of Rights and Permissions, 1305 Walt Whitman Road, Suite 300, Melville, NY 11747-4300 USA; Phone 516-576-2268; Email: rights@aip.org.

Article Title ("Work"):

Cyclic Freeze-Thaw Characteristics of Asphalt Concrete Pavement in Almaty Region

(Please indicate the final title of the Work. Any substantive changes made to the title after acceptance of the Work may require the completion of a new agreement.)

All Author(s):

Bagdat Teltayev, Aizhan Muta, Yerbol Aitbayev, Azamat Zhaisanbayev

(Please list all the authors' names in order as they will appear in the Work. All listed authors must be fully deserving of authorship and no such authors should be omitted. For large groups of authors, attach a separate list to this form.)

Title of Conference: **AMSMT 2025**

Name(s) of Editor(s) **Valentin L. Popov**

All Copyright Owner(s), if not Author(s):
(Please list all copyright owner(s) by name. In the case of a Work Made for Hire, the employer(s) or commissioning party(ies) are the copyright owner(s). For large groups of copyright owners, attach a separate list to this form.)

Copyright Ownership and Grant of Rights

For the purposes of this License, the "Work" consists of all content within the article itself and made available as part of the article, including but not limited to the abstract, tables, figures, graphs, images, and multimedia files, as well as any subsequent errata. "Supplementary Material" consists of material that is associated with the article but linked to or accessed separately (available electronically only), including but not limited to data sets and any additional files.

This Agreement is an Exclusive License to Publish not a Transfer of Copyright. Copyright to the Work remains with the Author(s) or, in the case of a Work Made for Hire, with the Author(s)' employer(s). AIP Publishing LLC shall own and have the right to register in its name the copyright to the proceedings issue or any other collective work in which the Work is included. Any rights granted under this License are contingent upon acceptance of the Work for publication by AIP Publishing. If for any reason and at its own discretion AIP Publishing decides not to publish the Work, this License is considered void.

Each Copyright Owner hereby grants to AIP Publishing LLC the following irrevocable rights for the full term of United States and foreign copyrights (including any extensions):

1. The exclusive right and license to publish, reproduce, distribute, transmit, display, store, translate, edit, adapt, and create derivative works from the Work (in whole or in part) throughout the world in all formats and media whether now known or later developed, and the nonexclusive right and license to do the same with the Supplementary Material.
2. The right for AIP Publishing to freely transfer and/or sublicense any or all of the exclusive rights listed in #1 above. Sublicensing includes the right to authorize requests for reuse of the Work by third parties.
3. The right for AIP Publishing to take whatever steps it considers necessary to protect and enforce, at its own expense, the exclusive rights granted herein against third parties.

Author Rights and Permitted Uses

Subject to the rights herein granted to AIP Publishing, each Copyright Owner retains ownership of copyright and all other proprietary rights such as patent rights in the Work.

Each Copyright Owner retains the following nonexclusive rights to use the Work, without obtaining permission from AIP Publishing, in keeping with professional publication ethics and provided clear credit is given to its first publication in an AIP Publishing proceeding. Any reuse must include a full credit line acknowledging AIP Publishing's publication and a link to the Version of Record (VOR) on AIP Publishing's site.

Each Copyright Owner may:

1. Reprint portions of the Work (excerpts, figures, tables) in future works created by the Author, in keeping with professional publication ethics.
2. Post the Accepted Manuscript (AM) to their personal web page or their employer's web page immediately after acceptance by AIP Publishing.
3. Deposit the AM in an institutional or funder-designated repository immediately after acceptance by AIP Publishing.

4. Use the AM for posting within scientific collaboration networks (SCNs). For a detailed description of our policy on posting to SCNs, please see our Web Posting Guidelines (<https://publishing.aip.org/authors/web-posting-guidelines>).
5. Reprint the Version of Record (VOR) in print collections written by the Author, or in the Author's thesis or dissertation. It is understood and agreed that the thesis or dissertation may be made available electronically on the university's site or in its repository and that copies may be offered for sale on demand.
6. Reproduce copies of the VOR for courses taught by the Author or offered at the institution where the Author is employed, provided no fee is charged for access to the Work.
7. Use the VOR for internal training and noncommercial business purposes by the Author's employer.
8. Use the VOR in oral presentations made by the Author, such as at conferences, meetings, seminars, etc., provided those receiving copies are informed that they may not further copy or distribute the Work.
9. Distribute the VOR to colleagues for noncommercial scholarly use, provided those receiving copies are informed that they may not further copy or distribute the Work.
10. Post the VOR to their personal web page or their employer's web page 12 months after publication by AIP Publishing.
11. Deposit the VOR in an institutional or funder-designated repository 12 months after publication by AIP Publishing.
12. Update a prior posting with the VOR on a noncommercial server such as arXiv, 12 months after publication by AIP Publishing.

Author Warranties

Each Author and Copyright Owner represents and warrants to AIP Publishing the following:

1. The Work is the original independent creation of each Author and does not infringe any copyright or violate any other right of any third party.
2. The Work has not been previously published and is not being considered for publication elsewhere in any form, except as a preprint on a noncommercial server such as arXiv, or in a thesis or dissertation.
3. Written permission has been obtained for any material used from other sources and copies of the permission grants have been supplied to AIP Publishing to be included in the manuscript file.
4. All third-party material for which permission has been obtained has been properly credited within the manuscript.
5. In the event that the Author is subject to university open access policies or other institutional restrictions that conflict with any of the rights or provisions of this License, such Author has obtained the necessary waiver from his or her university or institution.

This License must be signed by the Author(s) and, in the case of a Work Made for Hire, also by the Copyright Owners. One Author/Copyright Owner may sign on behalf of all the contributors/owners only if they all have authorized the signing, approved of the License, and agreed to be bound by it. The signing Author and, in the case of a Work Made for Hire, the signing Copyright Owner warrants that he/she/it has full authority to enter into this License and to make the grants this License contains.

1. The Author must please sign here (except if an Author is a U.S. Government employee, then please sign under #3 below):

	Aizhan Muta	November 25, 2025
Author(s) Signature	Print Name	Date

2. The Copyright Owner (if different from the Author) must please sign here:

Name of Copyright Owner	Authorized Signature and Title	Date
-------------------------	--------------------------------	------

3. If an Author is a U.S. Government employee, such Author must please sign below. The signing Author certifies that the Work was written as part of his/her official duties and is therefore not eligible for copyright protection in the United States.

Name of U.S. Government Institution (e.g., Naval Research Laboratory, NIST)

Author Signature	Print Name	Date
------------------	------------	------

PLEASE NOTE: NATIONAL LABORATORIES THAT ARE SPONSORED BY U.S. GOVERNMENT AGENCIES BUT ARE INDEPENDENTLY RUN ARE NOT CONSIDERED GOVERNMENT INSTITUTIONS. (For example, Argonne, Brookhaven, Lawrence Livermore, Sandia, and others.) Authors at these types of institutions should sign under #1 or #2 above.

If the Work was authored under a U.S. Government contract, and the U.S. Government wishes to retain for itself and others acting on its behalf, a paid-up, nonexclusive, irrevocable, worldwide license in the Work to reproduce, prepare derivative works from, distribute copies to the public, perform publicly, and display publicly, by or on behalf of the Government, please check the box below and add the relevant Contract numbers.

☐ Contract #(s) _____ [11.6.1]

LICENSE TERMS DEFINED

Accepted Manuscript (AM): The final version of an author's manuscript that has been accepted for publication and incorporates all the editorial changes made to the manuscript after submission and peer review. The AM does not yet reflect any of the publisher's enhancements to the work such as copyediting, pagination, and other standard formatting.

arXiv: An electronic archive and distribution server for research article preprints in the fields of physics, mathematics, computer science, quantitative biology, quantitative finance, and statistics, which is owned and operated by Cornell University, <http://arxiv.org/>.

Commercial and noncommercial scholarly use: *Noncommercial* scholarly uses are those that further the research process for authors and researchers on an individual basis for their own personal purposes. They are author-to-author interactions meant for the exchange of ideas. *Commercial* uses fall outside the author-to-author exchange and include but are not limited to the copying or distribution of an article, either in hard copy form or electronically, for resale or licensing to a third party; posting of the AM or VOR of an article by a site or service where an access fee is charged or which is supported by commercial paid advertising or sponsorship; use by a for-profit entity for any type of promotional purpose. Commercial uses require the permission of AIP Publishing.

Embargo period: The period of time during which free access to the full text of an article is delayed.

Employer's web page: A web page on an employer's site that highlights the accomplishments and research interests of the company's employees, which usually includes their publications. (See also: Personal web page and Scholarly Collaboration Network).

Exclusive License to Publish: An exclusive license to publish is a written agreement in which the copyright owner gives the publisher exclusivity over certain inherent rights associated with the copyright in the work. Those rights include the right to reproduce the work, to distribute copies of the work, to perform and display the work publicly, and to authorize others to do the same. The publisher does not hold the copyright to the work, which continues to reside with the author. The terms of the AIP Publishing License to Publish encourage authors to make full use of their work and help them to comply with requirements imposed by employers, institutions, and funders.

Full Credit Line: AIP Publishing's preferred format for a credit line is as follows (you will need to insert the specific citation information in place of the capital letters): "Reproduced from [FULL CITATION], with the permission of AIP Publishing." A FULL CITATION would appear as: Journal abbreviation, volume number, article ID number or page number (year). For example: Appl. Phys. Lett. 107, 021102 (2015).

Institutional repository: A university or research institution's digital collection of articles that have been authored by its staff and which are usually made publicly accessible. As authors are encouraged and sometimes required to include their published articles in their institution's repository, the majority of publishers allow for deposit of the Accepted Manuscript for this purpose. AIP Publishing also allows for the VOR to be deposited 12 months after publication of the Work.

Journal editorial office: The contact point for authors concerning matters related to the publication of their manuscripts. Contact information for the journal editorial offices may be found on the journal websites under the "About" tab.

Linking to the Version of Record (VOR): To create a link to your article in an AIP Publishing journal or proceedings, you need to know the CrossRef digital object identifier (doi). You can find the doi on the article's abstract page. For instructions on linking, please refer to our Web Posting Guidelines at <https://publishing.aip.org/authors/web-posting-guidelines>.

National Laboratories: National laboratories are sponsored and funded by the U.S. Government but have independent nonprofit affiliations and employ private sector resources. These institutions are classified as Federally Funded Research and Development Centers (FFRDCs). Authors working at FFRDCs are not

considered U.S. Government employees for the purposes of copyright. The Master Government List of FFRDCs may be found at <http://www.nsf.gov/statistics/ffrdclist/>.

Personal web page: A web page that is hosted by the author or the author's institution and is dedicated to the author's personal research interests and publication history. An author's profile page on a social media site or scholarly collaboration network site is *not* considered a personal web page. (See also: Scholarly Collaboration Network; Employer's web page).

Peer X-Press: A web-based manuscript submission system by which authors submit their manuscripts to AIP Publishing for publication, communicate with the editorial offices, and track the status of their submissions. The Peer X-Press system provides a fully electronic means of completing the License to Publish. A hard copy of the Agreement will be supplied by the editorial office if the author is unable to complete the electronic version of the form. (Conference Proceedings authors will continue to submit their manuscripts and forms directly to the Conference Editors.)

Preprint: A version of an author's manuscript intended for publication but that has not been peer reviewed and does not reflect any editorial input or publisher enhancements.

Professional Publication Ethics: AIP Publishing provides information on what it expects from authors in its "Statement of ethics and responsibilities of authors submitting to AIP Publishing journals" (<http://publishing.aip.org/authors/ethics>). AIP Publishing is also a member of the Committee on Publication Ethics (COPE) (<http://publicationethics.org/>), which provides numerous resources and guidelines for authors, editors, and publishers with regard to ethical standards and accepted practices in scientific publishing.

Scholarly Collaboration Network (SCN): Professional networking sites that facilitate collaboration among researchers as well as the sharing of data, results, and publications. SCNs include sites such as Academia.edu, ResearchGate, and Mendeley, among others.

Supplementary Material: Related material that has been judged by peer review as being relevant to the understanding of the article but that may be too lengthy or of too limited interest for inclusion in the article itself. Supplementary Material may include data tables or sets, appendixes, movie or audio clips, or other multimedia files.

U.S. Government employees: Authors working at Government organizations who author works as part of their official duties and who are not able to license rights to the Work, since no copyright exists. Government works are in the public domain within the United States.

Version of Record (VOR): The final published version of the article as it appears in the printed journal/proceedings or on the Scitation website. It incorporates all editorial input, is formatted in the publisher's standard style, and is usually viewed in PDF form.

Waiver: A request made to a university or institution to exempt an article from its open-access policy requirements. For example, a conflict will exist with any policy that requires the author to grant a nonexclusive license to the university or institution that enables it to license the Work to others. In all such cases, the Author must obtain a waiver, which shall be included in the manuscript file.

Work: The "Work" is considered all the material that comprises the article, including but not limited to the abstract, tables, figures, images, multimedia files that are directly embedded within the text, and the text itself. The Work does not include the Supplementary Material (see Supplementary Material above).

Work Made for Hire: Under copyright law, a work prepared by an employee within the scope of employment, or a work that has been specially ordered or commissioned for which the parties have agreed in writing to consider as a Work Made for Hire. The hiring party or employer is considered the author and owner of the copyright, not the person who creates the work.

Cyclic Freeze-Thaw Characteristics of Asphalt Concrete Pavement in Almaty Region

Abstract. The article experimentally (through a special temperature and moisture monitoring system) studies the characteristics (duration and minimum temperature) of freezing and thawing cycles (FTCs) of an asphalt concrete pavement on the section (58 km +895 m) of the “Almaty-Bishkek” highway located in the Almaty region (southern Kazakhstan). The characteristic periods and sub-periods, as well as the number and characteristics of FTCs, are determined. The obtained experimental data are processed using methods of the mathematical statistics and interpreted. A correlation was established between the duration and minimum temperature of the FTCs. The daily temperature distributions in the road pavement structures and subgrade on different days of the cold period under consideration are briefly described.

Keywords: pavement, subgrade, temperature, freeze-thaw cycles, duration, minimal temperature.

INTRODUCTION

Climate conditions have a significant impact on the strength and durability of roads, especially in regions with pronounced seasonal variability [1, 2]. Cyclic freezing and thawing processes significantly reduce the strength and service life of road surfaces. Asphalt concrete surfaces with reduced strength due to cyclic freezing and thawing (FTC) are vulnerable to both low-temperature cracking [3, 7, 9] and fatigue cracking [6, 10].

In view of the above, studying the temperature regime and the features of cyclic freezing and thawing in the layers of road pavement and in the subgrade soil of roads is a problem that is not only of scientific importance, but also of great practical significance.

The works of Teltayev et al. [4, 5, 8, 11, 12] are known, in which the changes and distribution of temperature in the road pavement structures and the subgrade of highways in several regions of Kazakhstan are experimentally investigated. But in them the FTC of layers of road pavements, including the asphalt concrete pavement, is not studied in detail.

In Kazakhstan, there is a standard [13] that sets requirements for the resistance of road asphalt concrete to FTC, and methods for testing their frost resistance [14]. However, it is unclear how accurately these requirements reflect the actual characteristics of FTC in asphalt concrete pavements.

In this article, the characteristics of FTC of the asphalt concrete pavement of a highway in the Almaty region (southern Kazakhstan) are studied experimentally (through a special temperature and moisture monitoring system).

EXPERIMENTAL SECTION

To conduct a long-term monitoring of temperature and moisture in layers of a road pavement and its subgrade, an experimental section was selected not far from Almaty (at 58 km + 895 m) on the “Almaty-Bishkek” highway, where a set of sensors for temperature and moisture were installed.

The road pavement structure on the section consists of the following layers: layer 1 - fine-grained dense asphalt concrete, thickness, $h_1 = 5$ cm; layer 2 - coarse-grained porous asphalt concrete, $h_2 = 10$ cm; layer 3 - fine-grained dense asphalt concrete, $h_3 = 6.5$ cm; layer 4 - Coarse-grained porous asphalt concrete, $h_4 = 15$ cm; layer 5 - fine sand and gravel mix, $h_5 = 25$ cm; layer 6 - coarse sand and gravel mix, $h_6 = 35$ cm. Subgrade soil - heavy sandy clay loam, $h_7 = 140$ cm.

TEMPERATURE AND MOISTURE MONITORING SYSTEM

In order to carry out long-term monitoring of temperature and moisture on the selected road section, a special measuring system with temperature and moisture sensors was installed. The sensors are installed in the layers of the road pavement and in the points of the subgrade at different depths (3 cm, 11 cm, 22 cm, 45 cm, 78 cm, 111 cm, 145 cm, 180 cm, 240 cm, 300 cm) from the fine-grained dense asphalt concrete pavement surface. The system is powered by solar panels. Temperature and moisture values of air and in the specified locations are measured hourly and the measurement results are saved.

RESULTS AND DISCUSSION

Freeze – Thaw Cycles

Figure 1 shows a graph of changes in air temperature (asphalt concrete surface) at the experimental section from October 2021 to March 2022. The graph highlights the periods of freezing and thawing: period I is a stable autumn-winter period of cyclic freezing and thawing; period II is an unstable spring period of cyclic freezing and thawing, which includes three sub-periods. Each of these sub-periods includes several cycles of freezing and thawing (FTC). The marked periods differ in duration and characteristics (number of FTCs and minimum temperatures) of temperature fluctuations.

FIGURE 1. Graph of air temperature changes with highlighted periods and cycles of freezing and thawing

Figure 2 shows a histogram of the distribution of the duration of freezing cycles on the road surface. As can be seen from the graph, the vast majority (78.57%) of freezing cycles have a duration of no more than 40 hours. A more

detailed view (inset) shows that the majority of cycles occur between 8 and 16 hours (43.63%) and 0 and 8 hours (32.73%), while cycles longer than 24 hours are extremely rare.

Figure 3 shows the cumulative curve of the duration of the freezing cycles, from which we can conclude that 85% of the freezing cycles were no longer than 47 hours.

Figure 4 shows the distribution of minimum temperatures in freezing cycles. More than 81% (specifically, 81.43%) of all cycles have minimum temperatures of at least -9°C . Additionally, 40% and 32.85% of cycles have temperatures between 0°C and -3°C , and between -3°C and -6°C , respectively.

Based on the cumulative curve (Fig. 5), the estimated minimum temperature in the freezing cycles is -8.6°C with an 85% confidence level.

Figure 6 shows the relationship between the minimum temperature and the duration of the freezing cycles. As the temperature decreases, the duration of the cycles increases. The linear approximation shows a high degree of correlation ($R^2 = 0.7365$), which confirms the existence of a stable relationship between the parameters under consideration. It should be noted that the correlation between the parameters is stronger for shorter cycles (up to approximately 50 hours). As the duration of the freezing cycles increases, the variation in the data also increases.

FIGURE 2. Distribution of duration of freezing cycles

FIGURE 3. Cumulative curve of freeze cycles duration

FIGURE 4. Distribution of minimum temperatures in freezing cycles

FIGURE 5. Cumulative curve of minimum temperatures in freezing cycles

FIGURE 6. Relationship between durations and minimum temperatures of freezing cycles

Temperature on Different Days of the Cold Period

Figures 7–13 show the temperature change graphs in the layers of the road pavement and the subgrade soil on the experimental section on different days of the cold period under consideration.

Analysis of these graphs shows that, as expected, only the upper part of the road pavement structure (up to a depth of about 25 cm) is sensitive to daily changes in ambient (air) temperature. The rest of the road pavement structure and the subgrade soil are relatively stable in terms of temperature. Their temperature changes gradually and more slowly in a year cycle.

As a rule, only the asphalt concrete pavement (the upper asphalt concrete layer of the road pavement) is subjected to daily cyclic freezing. In this case, the temperature is negative at night and in the morning, and positive during the day.

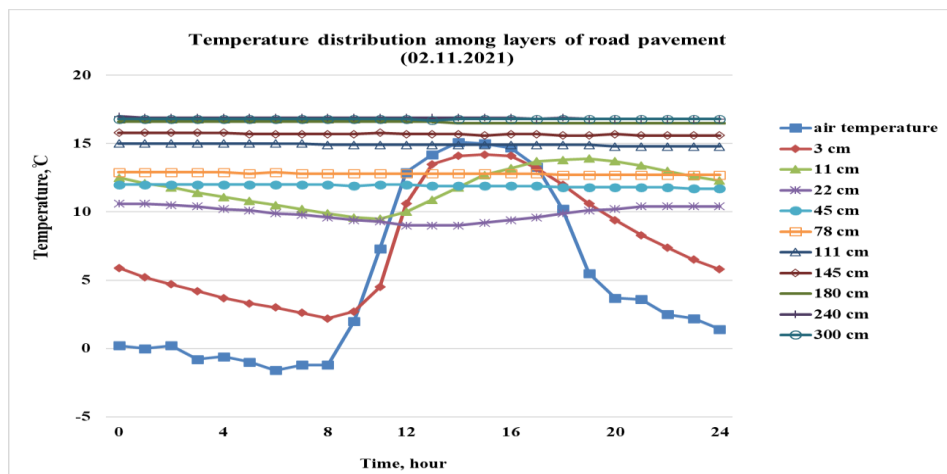

FIGURE 7. Daily temperature distribution in road pavement layers and subgrade (November 2, 2021)

FIGURE 8. Daily temperature distribution in road pavement layers and subgrade (December 29, 2021)

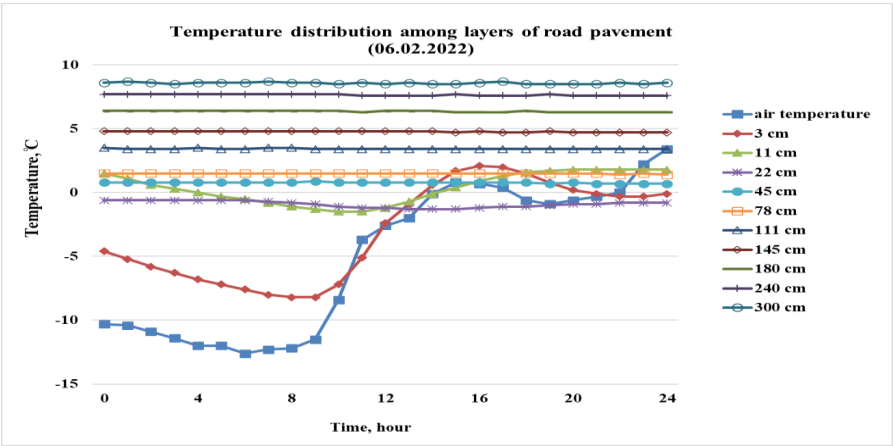

FIGURE 9. Daily temperature distribution in road pavement layers and subgrade (February 6, 2022)

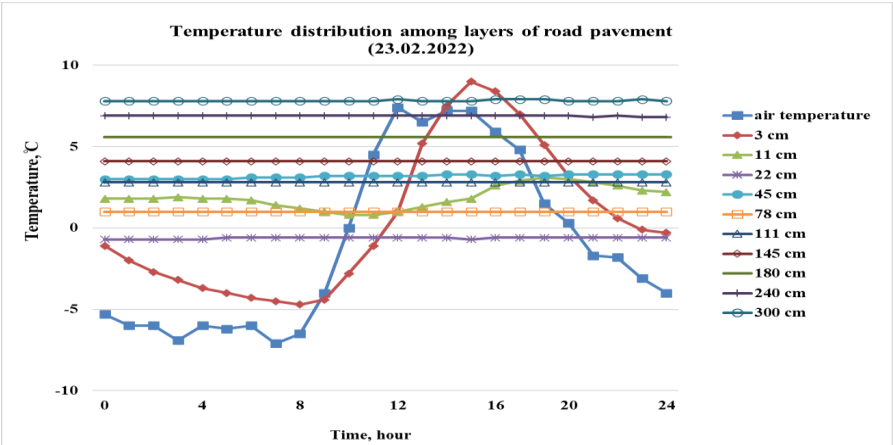

FIGURE 10. Daily temperature distribution in road pavement layers and subgrade (February 23, 2022)

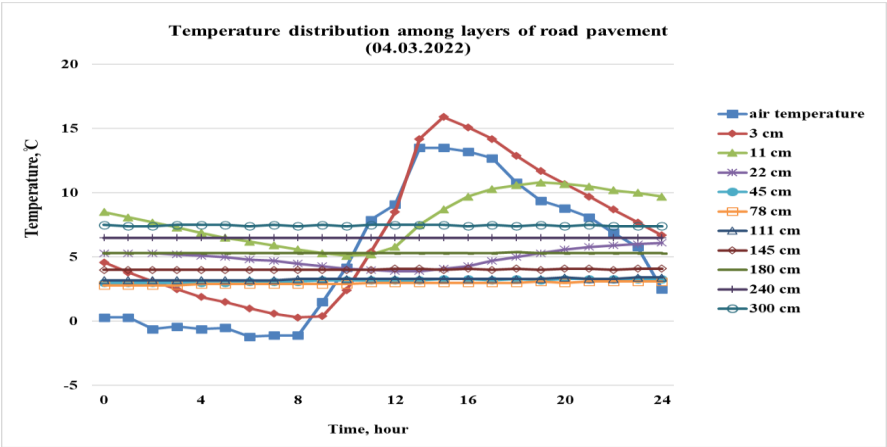

FIGURE 11. Daily temperature distribution in road pavement layers and subgrade (March 4, 2022)

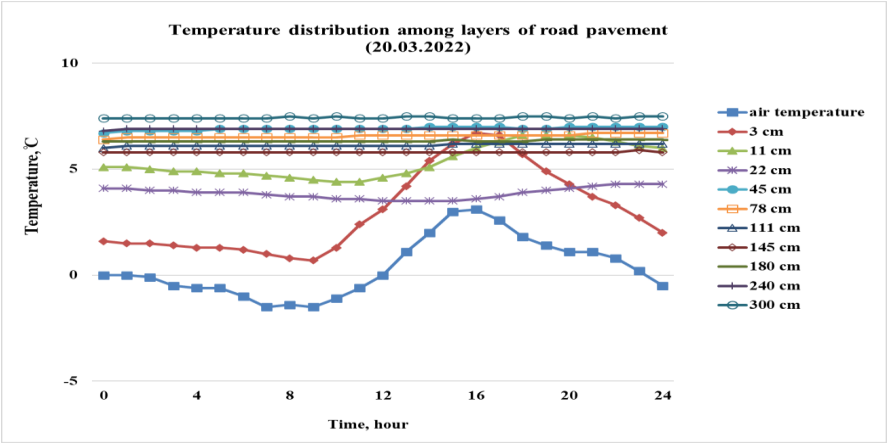

FIGURE 12. Daily temperature distribution in road pavement layers and subgrade (March 20, 2022)

FIGURE 13. Daily temperature distribution in road pavement layers and subgrade (March 31, 2022)

CONCLUSIONS

1. During the cold season of 2021-2022, there were 70 cycles of freezing and thawing of the road asphalt pavement surface. Of these, 60 cycles occurred during the autumn and winter stable periods of cyclic freezing and thawing, while only 10 cycles occurred during the spring unstable periods of cyclic freezing and thawing.

2. Most (78.57%) of the freezing cycles were no longer than 40 hours. The most common cycles were short-term, lasting between 8 and 16 hours (43.63%).

3. More than 81% of the freezing cycles have a minimum temperature between 0 and -9 °C, while 72% of all cycles have a minimum temperature between 0 and -6 °C. Cycles with temperatures below -12 °C accounted for less than 9%.

4. There is a correlation between the characteristics (duration and minimum temperature) of the FT cycles. As the temperature decreases, the duration of the cycles increases. The correlation is stronger for cycles with a shorter duration (up to approximately 50 hours).
