**Abstract.** The article presents research focused on studying the stress-strain state of a circular plate reinforced with ribs under the influence of an external short-term dynamic thermal load.

## INTRODUCTION

Nowadays, special attention is paid to ensuring the strength of thin elastic structures in engineering and construction that are subjected to various short-term dynamic loads and high-temperature effects, which cause deformation processes to occur at high rates. In this research, the problems of identifying structurally vulnerable regions of such structures and enhancing their strength by reinforcing these areas with ribs to redistribute accumulated stresses were addressed. A numerical solution algorithm was developed to determine the dynamic response of annular ribs with constant cross-sections under non-stationary vibrations and thermoelastic deformation states of a circular plate, taking into account the nonlinear geometric relationships between deformations and displacements.

## METHOD

We consider a circular plate reinforced with ribs in a ring-like pattern. The ribs have a rectangular cross-sectional shape and are firmly attached to the inner surface of the plate in a circular arrangement. It is assumed that the outer surface of the plate is subjected to a short-term, instantaneously increasing load that varies with time and temperature

**FIGURE 1.** Schematic view of the ribbed plate

Mathematical Model of the Problem. Taking into account the axial symmetry of the external dynamic load, the differential equation of motion for the ribbed plate can be written in the following form [1,2]:

$$\begin{aligned}
(N_1 r)' - N_2 &= r \rho \left[ \frac{\partial^2 u}{\partial t^2} (h + F) + \frac{\partial^2 \psi}{\partial t^2} S \right] \\
\frac{\partial(rQ)}{\partial r} + \left[ N_1 r \left( \frac{\partial w}{\partial r} \right) \right]' &= r \rho \frac{\partial^2 w}{\partial t^2} (h + F) - rP \\
\frac{\partial(rM_1)}{\partial r} - M_2 - rQ &= r \rho \left[ \frac{\partial^2 \psi}{\partial t^2} (h^3 / 12 + J) + \frac{\partial^2 u}{\partial t^2} S \right],
\end{aligned} \tag{1}$$

The boundary conditions for the structure are defined as follows:

- a) The edges of the plate are clamped:  $u=w=\psi=0$ ;  
b) From the condition of symmetry, at the central point  $r=0$  of the shell:  $u=\frac{\partial w}{\partial r}=\psi=0$ ,

The initial conditions are given at time  $t=0$  as follows:  $u=w=0$

The expressions for the internal stress resultants including normal and shear forces, as well as moments corresponding to a unit section of the ribbed plate are determined as follows:

$$Q=Q^0+Q^R; N_i=N_i^0+N_i^R; M_i=M_i^0+M_i^R, (i=1,2).$$

For the case without ribs, the internal stress resultants are taken into account as follows:

$$\begin{aligned}
N_1^0 &= Eh[\varepsilon_1^0 + \mu\varepsilon_2^0 - (1+\mu)\beta T] / (1-\mu^2); \\
N_2^0 &= Eh[\varepsilon_2^0 + \mu\varepsilon_1^0 - (1+\mu)\beta T] / (1-\mu^2); \\
M_1^0 &= D[\varepsilon_1^0 + \mu\varepsilon_2^0 - Eh(1+\mu)\beta T] / (1-\mu^2); \\
M_2^0 &= D[\varepsilon_2^0 + \mu\varepsilon_1^0 - Eh(1+\mu)\beta T] / (1-\mu^2); \\
Q^0 &= \frac{k^2 Eh}{2(1+\mu)} \varepsilon_{13}^0;
\end{aligned} \tag{2}$$

Here,  $E$  is the modulus of elasticity and  $\mu$  is the Poisson's coefficient.;  $D=Eh^3(1+\mu)^{-1}/12$ ; The mid-surface deformation can be expressed as follows.

$$\varepsilon_1 = \frac{\partial u}{\partial r} - \frac{w}{R} + \frac{1}{2} \left( \frac{\partial w}{\partial r} \right)^2; \quad \varepsilon_2 = u/r - w/R. \tag{3}$$

The deformation of an arbitrary point within the plate layer is as follows:

$$\varepsilon_1^z = \varepsilon_1 + z \frac{\partial \psi}{\partial r}; \quad \varepsilon_2^z = \varepsilon_2 + z \frac{\psi}{r}; \quad \varepsilon_{13}^z = f(z) \left( \frac{\partial w}{\partial r} + \psi \right); \tag{4}$$

$f(z)$  is a function.  $f(z) = f_0(z)$  represents the distribution law of the  $\sigma_{13}^0$  stress through the thickness of the plate, while  $f(z) = f_1(z)$  indicates the distribution law of the  $\sigma_{13}^0$  stress at points located in the ring [1];

$$f_0(z) = 6[0.25 - (zh)^2], \quad k^2 = 56; \quad f_1(z) = \frac{3h(h+2H)}{2(h+H)^2} \cdot (1+2zh)[1 - 2z(h+2H)],$$

Here,  $h$  is the height of the ring.

The stress forces generated in the cross-sections of ribs installed on a circular plate are determined as follows [3]:

$$\begin{aligned}
N_1^R &= \int_{h/2}^{h/2+H} G[\varepsilon_1 + \mu\varepsilon_2 - (1+\mu)\beta T] / (1-\mu^2) dz; \\
N_2^R &= \int_{h/2}^{h/2+H} G[\varepsilon_2 + \mu\varepsilon_1 - (1+\mu)\beta T] / (1-\mu^2) dz; \\
M_1^R &= \int_{h/2}^{h/2+H} G[\varepsilon_1 + \mu\varepsilon_2 - (1+\mu)\beta T] / (1-\mu^2) z dz; \\
M_2^R &= \int_{h/2}^{h/2+H} G[\varepsilon_2 + \mu\varepsilon_1 - (1+\mu)\beta T] / (1-\mu^2) z dz; \\
Q^R &= D_{13} \left( \frac{\partial w}{\partial r} + \psi \right) G_{13} dz.
\end{aligned} \tag{5}$$

Here,  $G = \frac{E}{1-\mu^2}$ ,  $G_{13} = \frac{5}{6} \cdot \frac{E}{2(1+\mu)}$ ,  $D_{13} = G_{13}H(r)$  elastic constants for ribs.

Thus, the dynamic deformation problem of the plate consists of the joint solution of the system of equations (1)-(5) given with the complete mathematical formulation and the boundary and initial conditions.

**Solving the problem.** The obtained system of equations (1), written using finite difference expressions, is as follows [4-6].

$$\begin{aligned} u_i^{n+1} &= 2u_i^n - u_i^{n-1} + \tau^2 \left\{ U_i^n / a - b \times (\Psi_i^n - b U_i^n / a) / (ac - b^2) \right\}; \\ w_i^{n+1} &= 2w_i^n - w_i^{n-1} + \tau^2 W_i^n / a; \\ \psi_i^{n+1} &= 2\psi_i^n - \psi_i^{n-1} + \tau^2 \times (\Psi_i^n - b U_i^n) / a / (c - b^2 / a) \end{aligned} \quad (6)$$

Here,  $a = \rho(h + F)$ ,  $b = \rho S$ ,  $c = \rho(h^3 / 12 + J)$ .

$$\begin{aligned} U_i^n &= \frac{(rN_1)_{(i+1/2)}^n - (rN_1)_{(i-1/2)}^n}{\Delta r_{i+1/2} r_{i+1/2}} + \frac{(N_2)_{(i+1/2)}^n - (N_2)_{(i-1/2)}^n}{2r_{i+1/2}}; \\ W_i^n &= \frac{(rQ)_{(i+1/2)}^n - (rQ)_{(i-1/2)}^n}{\Delta r_{i+1/2} r_{i+1/2}} + \left( \frac{w_i^n - w_{i-1}^n}{\Delta r_i} \right) \frac{1}{\Delta r_{i+1/2}} \frac{(rN_1)_{(i+1/2)}^n - (rN_1)_{(i-1/2)}^n}{\Delta r_{i+1/2}} + z \\ &\quad + \frac{w_{i+1}^n - 2w_i^n + w_{i-1}^n}{(\Delta r_i)^2} \frac{(N_1)_{(i+1/2)}^n + (N_1)_{(i-1/2)}^n}{2} + P_{i+1/2}^n; \\ \Psi_i^n &= \frac{(rM_1)_{(i+1/2)}^n - (rM_1)_{(i-1/2)}^n}{\Delta r_{i+1/2} r_{i+1/2}} - \frac{(M_2)_{(i+1/2)}^n + (M_2)_{(i-1/2)}^n}{2r_{i+1/2}} - \frac{Q_{i+1/2}^n + Q_{i-1/2}^n}{2}; \end{aligned}$$

Using the given equations, the  $u_i^n, w_i^n, \psi_i^n$  values at any point of the finite difference grid at any time can be determined.

Thus, the solution of differential equation (1) leads to calculations based on the recurrence formula (6).

## EXPERIMENTS

Using the obtained equations (6), an instantaneously increasing  $P(t) = P_0 \cdot \begin{cases} 1-t/\theta, & 0 \leq t \leq \theta, \\ 0, & t > \theta. \end{cases}$  load is applied to a ribbed circular plate with clamped edges. Here,  $P_0 = 5 \text{ MPa}$ ,  $\alpha = 10^{-3} \text{ s}$ . The stress-strain state of the circular plate under the loading described above is analyzed. The geometric and physical characteristics of the circular plate are as follows:  $R = 0.5 \text{ m}$ ;  $h = 0.01 \text{ m}$ ;  $E_0 = 75600 \text{ MPa}$ ;  $\nu = 0.3$ ;  $\rho = 2640 \text{ kg/m}^3$ . The coefficient of linear thermal expansion is  $\beta = (\beta_0 + \beta_1 T) 10^{-6} \text{ s}^{-1}$ . The temperature field is given by the function  $T = T(\rho)$ .  $E = (E_0 + E_1 T) 10^3 \text{ MPa}$ ,  $\beta_0 = 11.5$ ;  $T_p = 0.9\rho + 20$ ;  $\rho = r + k\Delta\rho$ ,  $k = 0.1 \dots 31$ ;  $\Delta\rho = 0.0005 \text{ m}$ .

The following cases of the stress-strain state of a circular plate reinforced with ribs, associated with variations in the cross-sections of the ribs attached to the plate, are studied.

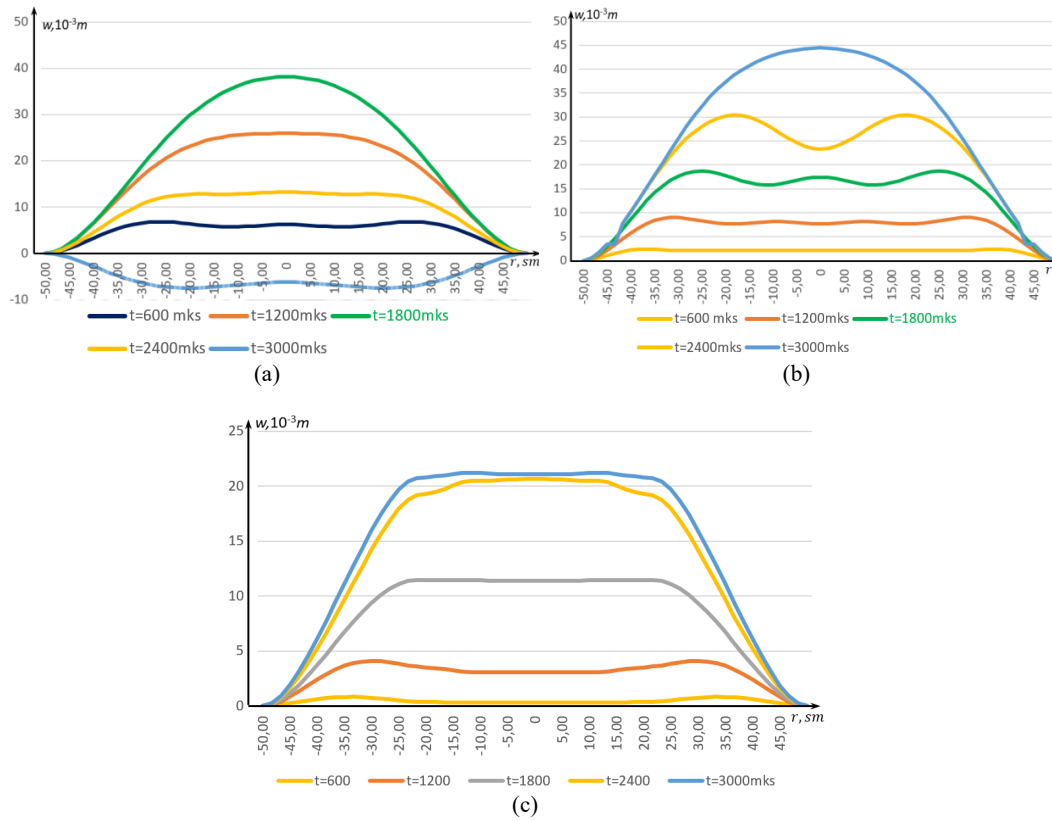

Let a circular plate be equipped with four ribs spaced equally at 10 centimeters apart. We consider the following cases where the thickness and width of the ribs are changed without altering their cross-sectional area:

Variant 1: The ribs have a thickness of  $h^p = 0.02 \text{ m}$  and a width of  $c = 0.067 \text{ m}$ ;

Variant 2: The ribs have a thickness of  $h^p = 0.04 \text{ m}$  and a width of  $c = 0.034 \text{ m}$ ;

Variant 3: The ribs have a thickness of  $h^p = 0.067 \text{ m}$  and a width of  $c = 0.02 \text{ m}$ ;

The results obtained from the calculations for these variants are depicted in the graphs:

**FIGURE 2.** Bending shapes of the plates at different time moments for cases with rib geometric dimensions (a)  $h^p = 0.02 m$ ,  $c = 0.067 m$ ; (b)  $h^p = 0.04 m$ ,  $c = 0.034 m$ ; (c)  $h^p = 0.067 m$ ,  $c = 0.02 m$ .

As can be seen from Fig. 2, the smallest maximum displacement at the center of the circular plate is observed in Variant 3, where ribs with smaller width and greater height are used. This leads to the conclusion that, without changing the volume of rib material and while maintaining the same cross-sectional area, increasing the height of the ribs can enhance the structural stiffness.

**FIGURE 3.** At the time moment  $t = 0.6 \mu s$ , the distribution of internal stress forces along the radius: (a) radial moments, (b) normal forces, and (c) shear forces.

## CONCLUSION

Three different variants were considered in which the width and height of the cross-section of the ribs attached to the circular plate were changed without altering the cross-sectional area. In these variants, the displacements of the plate points, internal stress forces, and moments are compared using graphs. As seen from Fig. 2, the smallest maximum displacement at the center point of the circular plate is observed in Variant 3, where ribs with smaller width and greater height are used. This leads to the conclusion that it is possible to increase the structural strength by increasing the height of the ribs without changing the volume of the rib material while keeping the cross-sectional area constant.

Figure 3 illustrates the processes characterizing the stress forces and moments within the structure. It can be observed that the variation of the  $N_1$  normal stress along the radius is uniform across all three variants at different time moments. In contrast, the  $N_2$  normal force and the  $M_2$  bending moment exhibit non-uniform variations, with radial stresses increasing in a stepwise manner at the locations where ribs are attached.

## Copyright Ownership and Grant of Rights

For the purposes of this License, the "Work" consists of all content within the article itself and made available as part of the article, including but not limited to the abstract, tables, figures, graphs, images, and multimedia files, as well as any subsequent errata. "Supplementary Material" consists of material that is associated with the article but linked to or accessed separately (available electronically only), including but not limited to data sets and any additional files.

This Agreement is an Exclusive License to Publish not a Transfer of Copyright. Copyright to the Work remains with the Author(s) or, in the case of a Work Made for Hire, with the Author(s) employer(s). AIP Publishing LLC shall own and have the right to register in its name the copyright to the proceedings issue or any other collective work in which the Work is included. Any rights granted under this License are contingent upon acceptance of the Work for publication by AIP Publishing. If for any reason and at its own discretion AIP Publishing decides not to publish the Work, this License is considered void.

Each Copyright Owner hereby grants to AIP Publishing LLC the following irrevocable rights for the full term of United States and foreign copyrights (including any extensions):

1. The exclusive right and license to publish, reproduce, distribute, transmit, display, store, translate, edit, adapt, and create derivative works from the Work (in whole or in part) throughout the world in all formats and media whether now known or later developed, and the nonexclusive right and license to do the same with the Supplementary Material.
2. The right for AIP Publishing to freely transfer and/or sublicense any or all of the exclusive rights listed in #1 above. Sublicensing includes the right to authorize requests for reuse of the Work by third parties.
3. The right for AIP Publishing to take whatever steps it considers necessary to protect and enforce, at its own expense, the exclusive rights granted herein against third parties.

## Author Rights and Permitted Uses

Subject to the rights herein granted to AIP Publishing, each Copyright Owner retains ownership of copyright and all other proprietary rights such as patent rights in the Work.

Each Copyright Owner retains the following nonexclusive rights to use the Work, without obtaining permission from AIP Publishing, in keeping with professional publication ethics and provided clear credit is given to its first publication in an AIP Publishing proceeding. Any reuse must include a full credit line acknowledging AIP Publishing's publication and a link to the Version of Record (VOR) on AIP Publishing's site.

Each Copyright Owner may:

1. Reprint portions of the Work (excerpts, figures, tables) in future works created by the Author, in keeping with professional publication ethics.
2. Post the Accepted Manuscript (AM) to their personal web page or their employer's web page immediately after acceptance by AIP Publishing.
3. Deposit the AM in an institutional or funder-designated repository immediately after acceptance by AIP Publishing.

4. Use the AM for posting within scientific collaboration networks (SCNs). For a detailed description of our policy on posting to SCNs, please see our Web Posting Guidelines (<https://publishing.aip.org/authors/web-posting-guidelines>).
5. Reprint the Version of Record (VOR) in print collections written by the Author, or in the Author's thesis or dissertation. It is understood and agreed that the thesis or dissertation may be made available electronically on the university's site or in its repository and that copies may be offered for sale on demand.
6. Reproduce copies of the VOR for courses taught by the Author or offered at the institution where the Author is employed, provided no fee is charged for access to the Work.
7. Use the VOR for internal training and noncommercial business purposes by the Author's employer.
8. Use the VOR in oral presentations made by the Author, such as at conferences, meetings, seminars, etc., provided those receiving copies are informed that they may not further copy or distribute the Work.
9. Distribute the VOR to colleagues for noncommercial scholarly use, provided those receiving copies are informed that they may not further copy or distribute the Work.
10. Post the VOR to their personal web page or their employer's web page 12 months after publication by AIP Publishing.
11. Deposit the VOR in an institutional or funder-designated repository 12 months after publication by AIP Publishing.
12. Update a prior posting with the VOR on a noncommercial server such as arXiv, 12 months after publication by AIP Publishing.

## Author Warranties

Each Author and Copyright Owner represents and warrants to AIP Publishing the following:

1. The Work is the original independent creation of each Author and does not infringe any copyright or violate any other right of any third party.
2. The Work has not been previously published and is not being considered for publication elsewhere in any form, except as a preprint on a noncommercial server such as arXiv, or in a thesis or dissertation.
3. Written permission has been obtained for any material used from other sources and copies of the permission grants have been supplied to AIP Publishing to be included in the manuscript file.
4. All third-party material for which permission has been obtained has been properly credited within the manuscript.
5. In the event that the Author is subject to university open access policies or other institutional restrictions that conflict with any of the rights or provisions of this License, such Author has obtained the necessary waiver from his or her university or institution.

This License must be signed by the Author(s) and, in the case of a Work Made for Hire, also by the Copyright Owners. One Author/Copyright Owner may sign on behalf of all the contributors/owners only if they all have authorized the signing, approved of the License, and agreed to be bound by it. The signing Author and, in the case of a Work Made for Hire, the signing Copyright Owner warrants that he/she/it has full authority to enter into this License and to make the grants this License contains.

1. The Author must please sign here (except if an Author is a U.S. Government employee, then please sign under #3 below):

 **Utkir Nishonov** 25.11.2025  
 Author(s) Signature Print Name Date

2. The Copyright Owner (if different from the Author) must please sign here:

Name of Copyright Owner Authorized Signature and Title Date

3. If an Author is a U.S. Government employee, such Author must please sign below. The signing Author certifies that the Work was written as part of his/her official duties and is therefore not eligible for copyright protection in the United States.

Name of U.S. Government Institution (e.g., Naval Research Laboratory, NIST)

Author Signature Print Name Date

PLEASE NOTE: NATIONAL LABORATORIES THAT ARE SPONSORED BY U.S. GOVERNMENT AGENCIES BUT ARE INDEPENDENTLY RUN ARE NOT CONSIDERED GOVERNMENT INSTITUTIONS. (For example, Argonne, Brookhaven, Lawrence Livermore, Sandia, and others.) Authors at these types of institutions should sign under #1 or #2 above.

If the Work was authored under a U.S. Government contract, and the U.S. Government wishes to retain for itself and others acting on its behalf, a paid-up, nonexclusive, irrevocable, worldwide license in the Work to reproduce, prepare derivative works from, distribute copies to the public, perform publicly, and display publicly, by or on behalf of the Government, please check the box below and add the relevant Contract numbers.

☐ Contract #(s) \_\_\_\_\_ [1.16.1]

## LICENSE TERMS DEFINED

**Accepted Manuscript (AM):** The final version of an author's manuscript that has been accepted for publication and incorporates all the editorial changes made to the manuscript after submission and peer review. The AM does not yet reflect any of the publisher's enhancements to the work such as copyediting, pagination, and other standard formatting.

**arXiv:** An electronic archive and distribution server for research article preprints in the fields of physics, mathematics, computer science, quantitative biology, quantitative finance, and statistics, which is owned and operated by Cornell University, <http://arxiv.org/>.

**Commercial and noncommercial scholarly use:** *Noncommercial* scholarly uses are those that further the research process for authors and researchers on an individual basis for their own personal purposes. They are author-to-author interactions meant for the exchange of ideas. *Commercial* uses fall outside the author-to-author exchange and include but are not limited to the copying or distribution of an article, either in hard copy form or electronically, for resale or licensing to a third party; posting of the AM or VOR of an article by a site or service where an access fee is charged or which is supported by commercial paid advertising or sponsorship; use by a for-profit entity for any type of promotional purpose. Commercial uses require the permission of AIP Publishing.

**Embargo period:** The period of time during which free access to the full text of an article is delayed.

**Employer's web page:** A web page on an employer's site that highlights the accomplishments and research interests of the company's employees, which usually includes their publications. (See also: Personal web page and Scholarly Collaboration Network).

**Exclusive License to Publish:** An exclusive license to publish is a written agreement in which the copyright owner gives the publisher exclusivity over certain inherent rights associated with the copyright in the work. Those rights include the right to reproduce the work, to distribute copies of the work, to perform and display the work publicly, and to authorize others to do the same. The publisher does not hold the copyright to the work, which continues to reside with the author. The terms of the AIP Publishing License to Publish encourage authors to make full use of their work and help them to comply with requirements imposed by employers, institutions, and funders.

**Full Credit Line:** AIP Publishing's preferred format for a credit line is as follows (you will need to insert the specific citation information in place of the capital letters): "Reproduced from [FULL CITATION], with the permission of AIP Publishing." A FULL CITATION would appear as: Journal abbreviation, volume number, article ID number or page number (year). For example: Appl. Phys. Lett. 107, 021102 (2015).

**Institutional repository:** A university or research institution's digital collection of articles that have been authored by its staff and which are usually made publicly accessible. As authors are encouraged and sometimes required to include their published articles in their institution's repository, the majority of publishers allow for deposit of the Accepted Manuscript for this purpose. AIP Publishing also allows for the VOR to be deposited 12 months after publication of the Work.

**Journal editorial office:** The contact point for authors concerning matters related to the publication of their manuscripts. Contact information for the journal editorial offices may be found on the journal websites under the "About" tab.

**Linking to the Version of Record (VOR):** To create a link to your article in an AIP Publishing journal or proceedings, you need to know the CrossRef digital object identifier (doi). You can find the doi on the article's abstract page. For instructions on linking, please refer to our Web Posting Guidelines at <https://publishing.aip.org/authors/web-posting-guidelines>.

**National Laboratories:** National laboratories are sponsored and funded by the U.S. Government but have independent nonprofit affiliations and employ private sector resources. These institutions are classified as Federally Funded Research and Development Centers (FFRDCs). Authors working at FFRDCs are not

considered U.S. Government employees for the purposes of copyright. The Master Government List of FFRDCs may be found at <http://www.nsf.gov/statistics/ffrdclist/>.

**Personal web page:** A web page that is hosted by the author or the author's institution and is dedicated to the author's personal research interests and publication history. An author's profile page on a social media site or scholarly collaboration network site is *not* considered a personal web page. (See also: Scholarly Collaboration Network; Employer's web page).

**Peer X-Press:** A web-based manuscript submission system by which authors submit their manuscripts to AIP Publishing for publication, communicate with the editorial offices, and track the status of their submissions. The Peer X-Press system provides a fully electronic means of completing the License to Publish. A hard copy of the Agreement will be supplied by the editorial office if the author is unable to complete the electronic version of the form. (Conference Proceedings authors will continue to submit their manuscripts and forms directly to the Conference Editors.)

**Preprint:** A version of an author's manuscript intended for publication but that has not been peer reviewed and does not reflect any editorial input or publisher enhancements.

**Professional Publication Ethics:** AIP Publishing provides information on what it expects from authors in its "Statement of ethics and responsibilities of authors submitting to AIP Publishing journals" (<http://publishing.aip.org/authors/ethics>). AIP Publishing is also a member of the Committee on Publication Ethics (COPE) (<http://publicationethics.org/>), which provides numerous resources and guidelines for authors, editors, and publishers with regard to ethical standards and accepted practices in scientific publishing.

**Scholarly Collaboration Network (SCN):** Professional networking sites that facilitate collaboration among researchers as well as the sharing of data, results, and publications. SCNs include sites such as Academia.edu, ResearchGate, and Mendeley, among others.

**Supplementary Material:** Related material that has been judged by peer review as being relevant to the understanding of the article but that may be too lengthy or of too limited interest for inclusion in the article itself. Supplementary Material may include data tables or sets, appendixes, movie or audio clips, or other multimedia files.

**U.S. Government employees:** Authors working at Government organizations who author works as part of their official duties and who are not able to license rights to the Work, since no copyright exists. Government works are in the public domain within the United States.

**Version of Record (VOR):** The final published version of the article as it appears in the printed journal/proceedings or on the Scitation website. It incorporates all editorial input, is formatted in the publisher's standard style, and is usually viewed in PDF form.

**Waiver:** A request made to a university or institution to exempt an article from its open-access policy requirements. For example, a conflict will exist with any policy that requires the author to grant a nonexclusive license to the university or institution that enables it to license the Work to others. In all such cases, the Author must obtain a waiver, which shall be included in the manuscript file.

**Work:** The "Work" is considered all the material that comprises the article, including but not limited to the abstract, tables, figures, images, multimedia files that are directly embedded within the text, and the text itself. The Work does not include the Supplementary Material (see Supplementary Material above).

**Work Made for Hire:** Under copyright law, a work prepared by an employee within the scope of employment, or a work that has been specially ordered or commissioned for which the parties have agreed in writing to consider as a Work Made for Hire. The hiring party or employer is considered the author and owner of the copyright, not the person who creates the work.
